

PULSAR

CAL. 8F56 PERPETUAL CALENDAR

PERPETUAL CALENDAR

- Once set, the calendar automatically adjusts for odd and even months including February of leap years up to February 28, 2100.
- It indicates the month, date and the number of years since the last leap year.

DUAL TIME DISPLAY

(only for models with the 24-hour hand)

- The time of an area in a different time zone can be displayed.
- When you travel abroad, the time and date of the place you visit can easily be shown on the watch.

ENGLISH

WORLD TIME DISPLAY

(only for models with the 24-hour hand and rotating bezel for world time display)

- The times of 22 cities throughout the world can be displayed.

HIGH ACCURACY

- Loss/gain: Annual rate of less than 20 seconds

DISPLAY AND CROWN/BUTTONS

English

English

Before using the watch:

- Because the calendar is preadjusted at the factory, you only need to set the time and date, and the calendar will automatically update itself.
- Before using the watch, be sure to read "HOW TO CHECK THE CALENDAR", and then set the time and date correctly following the procedure in "TIME (DUAL TIME for models with 24-hour hand) / DATE SETTING".

* In case the calendar indication is not correct after the time/date setting is made, CONSULT THE RETAILER from whom the watch was purchased or an AUTHORIZED JEWELRY DEALER.

English

SCREW DOWN CROWN

[for models with screw down crown]

- Unlocking the crown**
- 1 Turn Crown counterclockwise until you no longer feel the threads turning.
 - 2 Crown can be pulled out.

- Locking the crown**
- 1 Push Crown back in to normal position.
 - 2 Turn Crown clockwise while pressing it lightly until tight.

English

TIME (DUAL TIME for models with 24-hour hand) / DATE SETTING

- For models without 24-hour hand

CROWN

Pull out to second click when the second hand is at the 12 o'clock position, and turn to set the minute hand.

Push back completely in accordance with a time signal.

Pull out to first click, and turn to set the hour hand and date.

Push back completely.

- For models with 24-hour hand

The 24-hour hand can be used either as an AM/PM indicator that turns a full circle in 24 hours, or as a dual time hand that indicates the time of an area in a different time zone, as you require.

CROWN

Pull out to second click when the second hand is at the 12 o'clock position.

- To use the 24-hour hand as an AM/PM indicator:

Turn to set the minute and 24-hour hands to the current time of your area.

- To use the 24-hour hand as a dual time hand (same procedure):

Turn to set the minute and 24-hour hands to the time of a different area.

Push back completely in accordance with a time signal.

English

24-hour hand (showing the current time of your area)

Pull out to first click and turn to set the current date of your area.

Turn to set the hour hand to the current time of your area.

Push back completely.

24-hour hand (showing the time of a different area)

TIME DIFFERENCE ADJUSTMENT DURING TRIP

- The hour hand can be set independently of the other hands. Therefore, when you are traveling around different time zones, the time and date of the place you visit can easily be shown on the watch only by turning the hour hand.

CROWN

Pull out to first click.

Turn to set the hour hand and date to the time and date of the place you visit.

Push back completely.

* The 24-hour hand keeps indicating the time of the area you have selected in the "TIME (DUAL TIME for models with 24-hour hand) / DATE SETTING".

- How to calculate the time difference between two cities

Ex.) When you move from Rome to New York:

- [A] Rome time : +1 hour from GMT
- [B] New York time : -5 hours from GMT

So the time difference between Rome and New York is:

$$[B] - [A] = (-5) - (+1) = -6 \text{ (hours)}$$

You should move the hour hand back 6 hours.

English

TIME DIFFERENCES			
GMT = Greenwich Mean Time		(As of March, 1999)	
GMT ± (hours)	Major cities in respective time zones	GMT ± (hours)	Major cities in respective time zones
0	London*, Casablanca, Dakar	+12	Wellington*, Fiji Islands*, Auckland*
+1	Paris*, Rome*, Amsterdam*, Frankfurt*, Berlin*	-11	Midway Islands
+2	Cairo*, Athens*, Istanbul*, Kiev*, Cape Town, Tripoli	-10	Honolulu
+3	Moscow*, Mecca, Nairobi	-9	Anchorage*
+4	Dubai	-8	Los Angeles*, San Francisco*, Vancouver*, Dawson (Canada)*
+5	Karachi, Tashkent	-7	Denver*, Edmonton (Canada)*
+6	Dacca	-6	Chicago*, Mexico City*
+7	Bangkok, Phnom Penh, Jakarta	-5	New York*, Washington, D.C.*, Montreal*
+8	Hong Kong, Manila, Beijing, Singapore	-4	Caracas, Santiago (Chile)*
+9	Tokyo, Seoul, Pyongyang	-3	Rio de Janeiro*, Buenos Aires
+10	Sydney*, Guam, Khabarovsk*	-2	
+11	Nouméa (New Caledonia), Solomon Islands	-1	Azores*, Cape Verde Islands

10 ★ The cities marked with "*" (asterisk) use daylight saving time (summer time).

WORLD TIME DISPLAY (only for models with the 24-hour hand and rotating bezel for world time display)

- By using the 24-hour hand and rotating bezel, the times of 22 cities in different time zones throughout the world can be read from the dial.

Turn the rotating bezel so that the city mark corresponding to the area whose time has been set in the "TIME (DUAL TIME for models with 24-hour hand) / DATE SETTING" aligns with the 24-hour hand.

Each city mark on the bezel indicates the time of the city or area it represents. Read the times in the various cities, referring to the 24-hour marks on the dial.

● **Marks on the bezel and names of cities/areas**

Marks on the bezel	Name of city or area	Marks on the bezel	Name of city or area
G M T	Greenwich	N O U	Nouméa
R O M	Rome	W L G	Wellington
I S T	Istanbul	H N L	Honolulu
M O W	Moscow	A N C	Anchorage
D X B	Dubai	L A X	Los Angeles
K H I	Karachi	D E N	Denver
D A C	Dacca	C H I	Chicago
B K K	Bangkok	N Y C	New York
H K G	Hong Kong	C C S	Caracas
T Y O	Tokyo	B U E	Buenos Aires
S Y D	Sydney	P D L	Azores

● **Example of use**

If you are in Rome and wish to know the time of New York:
Set "ROM" on the bezel to the 24-hour hand.

Read the time that "NYC" on the bezel points to in the 24-hour indication.
Rome : 17:08 → 5:08 p.m.
New York : 11:08 → 11:08 a.m.

12

24-HOUR DISPLAY (only for models with the 24-hour hand and rotating bezel for 24-hour display)

- By using the 24-hour hand and rotating bezel, the times of areas in different time zones throughout the world can be read from the dial.

● **Example of use**

If you are in Rome and wish to know the time of New York:

Check that "24" on the rotating bezel is at the 12 o'clock position.

13

Calculate the time difference between Rome and New York by referring to "● How to calculate the time difference between two cities" on page 9. (→ The time difference is -6 hours.)

Turn the rotating bezel clockwise by 6 hours.

* When the time of your area is ahead of the time of the desired place, turn the bezel clockwise. When the time of your area is behind the time of the desired place, turn the bezel counterclockwise.

Read the 24-hour mark on the rotating bezel that the 24-hour hand points to.

* The time of your area can be known by reading the 24-hour mark on the dial that the 24-hour hand points to.

HOW TO CHECK THE CALENDAR

CROWN

Pull out to first click, and push back in to normal position within a second.

● The watch shows the calendar in the following order:

- 1. Leap year (Second hand)
- 2. Month (Calendar frame)
- 3. Date (Calendar frame)

1. Leap year indication

The second hand moves quickly at five-second intervals and stops to indicate the number of years that have passed since the last leap year. Before pulling out the crown to the first click, check and remember where the second hand is so that you can read how many seconds it has advanced.

	5 seconds	10 seconds	15 seconds	20 seconds
Quick movement of second hand				
Number of years since the last leap year	1 year	2 years	3 years	4 years (leap year)
Year	1997 2001 2005 . . 2093 2097	1998 2002 2006 . . 2094 2098	1999 2003 2007 . . 2095 2099	2000 2004 2008 . . 2096 -

2. Current month

The current month is shown in the calendar frame for 5 seconds.

** January is represented by "1", February "2", and so on.*

3. Current date

The numeral in the calendar frame returns to the current date.

** When the month and date are represented by the same numeral as in the case of "January 1st", "February 2nd" and so on, the numeral in the calendar frame quickly advances and moves back by one to indicate that the month and date numerals are identical.*

★ After the calendar has been displayed, the second hand starts moving quickly and then resumes normal movement.

NOTES ON OPERATING THE WATCH

TIME (DUAL TIME) / DATE SETTING

- When setting the date, turn the crown counterclockwise to advance the date and clockwise to move it back. The date changes one day by turning the hour hand two full circles.
- The date changes between 11:45 p.m. and 0:30 a.m. while the watch is in operation and between 9:00 p.m. and 3:00 a.m. when it is changed manually by turning the hands. Therefore, note the following.

[AM/PM checking]

When setting the hour hand, check that AM/PM is correctly set.

- * When setting the time by advancing the hands, turn the hour hand past the 3 o'clock marker. If the date advances, the time is set for the AM period. If it does not change, the time is set for the PM period.
- * When setting the time by turning back the hands, turn the hour hand past the 9 o'clock marker. If the date moves back, the time is set for the PM period. If it does not change, the time is set for the AM period.

[Setting the time between 9:00 p.m. and 3:00 a.m.]

- * If the time is adjusted to the time period between 9:00 p.m. and 3:00 a.m., the date may not change properly. The watch, however, will indicate the date properly after 3:00 a.m.
- * To prevent this from occurring, first turn back the hour hand past 9:00 p.m., checking that the date moves back to the previous day, and then, advance the hands to the desired time.

- When setting the minute hand, advance it 4 to 5 minutes ahead of the desired time and then turn it back to the exact time.
- The hour hand moves in one hour increments.
- When adjusting the date and hour hand, turn the crown slowly. In doing so, the other hands may move slightly. However, this is not a malfunction.

TIME DIFFERENCE ADJUSTMENT DURING TRIP

- To put back the time, turn the crown clockwise. To advance the time, turn it counterclockwise.
- When moving back the hour hand past the 12 o'clock marker to set it to a time between 9:00 p.m. and 0:00 a.m., put back the hour hand further past 8:00 p.m., and then advance it to the desired hour.

TIME DIFFERENCE

- The time differences and the use of daylight saving time (summer time) may change in some areas or countries when they are so decided by the countries concerned.

HOW TO CHECK THE CALENDAR

- If the crown is pulled out to the second click instead of the first click and pushed back in to the normal position, the watch will not show the calendar.
- Do not leave the crown at the first or second click when you use the watch, as this will shorten the battery life.

● Note on the leap second

One day normally is said to consist of 86,400 seconds. In fact, it can be longer or shorter than this because of irregular changes in the rotation cycle of the earth. When the accumulated fluctuations in the length of a day total plus or minus one second, one second must then be added or subtracted as a correction factor. This is known as a "leap second".

The leap second correction is executed every year or two simultaneously throughout the world on the basis of information collected by astronomical observatories all over the world. The correction is effected between 11:59'59" p.m. and 0:00'00" a.m. GMT either on December 31 or on June 30, during which one second is added or subtracted. When this happens, please adjust your watch accordingly. Please refer to your newspaper for information on the leap second.

BATTERY CHANGE

10
Years Battery life : Approx. 10 years
Battery : SEIKO CR2412

English

20

NPWA50_E

Page 20-21

● Battery life indicator

When the second hand starts moving at two-second intervals instead of the normal one-second interval, replace the battery with a new one as soon as possible. Otherwise, the watch will stop operating in two weeks.

- * The time accuracy is not affected even if the second hand is moving at two-second intervals.
- * While the second hand is moving at two-second intervals, the date will not change and the watch will not show the calendar even if the crown is pulled out to the first click.
- * If the watch is left in very low temperatures, the second hand may temporarily start moving at two-second intervals and the date does not change to the next. When the watch returns to normal temperature, however, this condition will be corrected and the correct date will be displayed on the next day. If the second hand still moves at two-second intervals and the date does not change properly, replace the battery with a new one.

● Checking and adjustment of the calendar after battery change

The calendar function is not affected by battery changes. However, after the battery is replaced with a new one, be sure to check that the calendar is correct. (See "HOW TO CHECK THE CALENDAR")

If the watch does not indicate the leap year, month and date correctly, have the watch adjusted by an AUTHORIZED PULSAR DEALER.

English

21

05.4.19, 9:10 AM Adobe PageMaker 6.5J/PPC

WARNING

- Do not remove the battery from the watch.
- If it is necessary to take out the battery, keep it out of the reach of children. If a child swallows it, consult a doctor immediately.
- Never short-circuit, tamper with or heat the battery, and never expose it to fire. The battery may burst, become very hot or catch fire.

CAUTION

- The battery is not rechargeable. Never attempt to recharge it, as this may cause battery leakage or damage to the battery.

TO PRESERVE THE QUALITY OF YOUR WATCH

WATER RESISTANCE

● **Non-water resistant**

If "WATER RESISTANT" is not inscribed on the case back, your watch is not water resistant, and care should be taken not to get it wet as water may damage the movement. If the watch becomes wet, we suggest that you have it checked by an AUTHORIZED PULSAR DEALER or SERVICE CENTER.

● **Water resistance (3 bar)**

If "WATER RESISTANT" is inscribed on the case back, your watch is designed and manufactured to withstand up to 3 bar, such as accidental contact with splashes of water or rain, but it is not designed for swimming or diving.

● **Water resistance (5 bar)***

If "WATER RESISTANT 5 BAR" is inscribed on the case back, your watch is designed and manufactured to withstand up to 5 bar and is suitable for swimming, yachting and taking a shower.

● **Water resistance (10 bar/15 bar/20 bar)***

If "WATER RESISTANT 10 BAR", "WATER RESISTANT 15 BAR" or "WATER RESISTANT 20 BAR" is inscribed on the case back, your watch is designed and manufactured to withstand up to 10 bar/15 bar/20 bar and is suitable for taking a bath, shallow diving, but not for scuba diving. We recommend that you wear a PULSAR Diver's watch for scuba diving.

- Before using the water resistance 5, 10, 15 or 20 bar watch in water, be sure the crown is pushed in completely.
- Do not operate the crown when the watch is wet or in water. If used in sea water, rinse the watch in fresh water and dry it completely.
- When taking a shower with the water resistance 5 bar watch, or taking a bath with the water resistance 10, 15 or 20 bar watch, be sure to observe the following:
 - Do not operate the crown when the watch is wet with soapy water or shampoo.
 - If the watch is left in warm water, a slight time loss or gain may be caused. This condition, however, will be corrected when the watch returns to normal temperature.

NOTE:
Pressure in bar is a test pressure and should not be considered as corresponding to actual diving depth since swimming movement tends to increase the pressure at a given depth. Care should also be taken on diving into water.

TEMPERATURES

 Your watch works with a stable accuracy within a temperature range of 5°C and 35°C (41°F and 95°F).

24 Do not leave your watch in very low temperatures below -5°C (+23°F) for

a long time since the cold may cause a slight time loss or gain. However, the above conditions will be corrected when the watch returns to normal temperature.

CARE OF CASE AND BRACELET

 To prevent possible rusting of the case and bracelet caused by dust, moisture and perspiration, wipe them periodically with a soft dry cloth.

SHOCKS & VIBRATION

 Light activities will not affect your watch, but be careful not to hit it against hard surfaces, as this may cause damage.

CHEMICALS

 Be careful not to expose the watch to solvents, mercury, detergents, oils, perfumes, adhesives, etc. The case, bracelet, etc. may become discolored, deteriorated or damaged.

MAGNETISM

 Your watch will be adversely affected by strong magnetism. Keep it away from close contact with magnetic objects.

PERIODIC CHECK

 It is recommended that the watch be checked once every 2 to 3 years. Have your watch checked by an AUTHORIZED PULSAR DEALER or SERVICE CENTER to ensure that the case, crown, buttons, gasket and crystal seal remain intact.

PRECAUTION REGARDING CASE BACK PROTECTIVE FILM

 If your watch has a protective film and/or a sticker on the case back, be sure to peel them off before using your watch.
